HELIPORTS - HELISTOPS
IN THE
UNITED STATES
CANADA
PUERTO RICO

Published by
AEROSPACE INDUSTRIES ASSOCIATION
1725 DE SALES STREET, N. W.
WASHINGTON, D. C. 20036
1973
Island Helicopters operate "Metrobus" scheduled morning/evening commuter service on weekdays between their Long Island heliport and New York's Wall Street and 34th Street East heliports.
This directory, compiled by the Aerospace Industries Association, shows a steady increase in helicopter facilities of 2.5% from 2,326 in 1972 to 2,384 (including 44 proposed) in August 1973. Of these 2,375 heliports, 2,134 are ground level and 241 are elevated. Directory information is provided by State Directors of Aeronautics, the Department of Transport of Canada, the Federal Aviation Administration and the helicopter operators and manufacturers.

The petroleum industry alone provides landing platforms for helicopters on the more than 2,000 off-shore oil rigs in the Gulf of Mexico and more in other coastal waters. The U.S. Forest Service maintains approximately 300 heliports and more than 5,000 unimproved helistops around the country. In addition, more and more banks have landing areas for the modern bank runner -- the helicopter. Geographically, California continues to lead with 413 facilities.

Today, there are 384 hospital heliports, compared to the 36 reported in our 1965 survey. (Note Hospital Heliport Addendum, page 273.) Thanks to the hospital heliport and ambulance helicopter, many states, notably Maryland and Illinois, now transport victims of serious highway accidents and other critically ill patients to a Trauma Center -- a hospital with around-the-clock teams of specialists trained in the treatment of shock and injuries resulting from all causes. Illinois now has 44 Trauma Centers in its statewide system and is working toward the goal of a heliport at each of its 350 hospitals.

In recent disastrous high-rise building fires the helicopter has proved to be the only way to reach and rescue victims trapped on the roof. This fire rescue capability of the helicopter emphasizes the need for heliports on public buildings, hotels, and hospitals being built today.

And there is a need for public-use heliports, particularly in city centers, as airport and highway traffic continue to increase. A few feet of ground level or rooftop space could make convenient point-to-point travel by helicopter available to all.

* Indicates proposed facility
Her front lawn is a heliport for Whirly-Girl #126, Mrs. Paul E. Kaiser. She initiated Philadelphia's first hospital heliport at The Medical College of Pennsylvania as Board Chairman.

The Portland (Oregon) General Electric's Bell JetRanger is ready for takeoff from the company's rooftop heliport.

- 257 -
A Maryland State Highway Police ambulance helicopter lands at the University of Maryland Hospital Heliport. Because of these police ambulance helicopters, everyone in the State is less than an hour from highly specialized medical care at the Hospital's Trauma Center.

A Vought Alouette III ambulance helicopter transporting highway accident victims arrives at California's Loma Linda University Hospital Heliport.
When minutes really count, the highway is an "instant" heliport for the life-saving ambulance helicopter.

St. Joseph's Hospital Heliport is the first in Tampa, Florida. Thanks to the Hospital's Aviation Consultant, Nancy Lee McKay, there are now nine more hospital heliports in the Tampa area.

Good Samaritan Hospital
Mt. Vernon,
Approach and Departure Paths: an obstruction-free path for flight in a plane leading outward and upward from the edge of the take-off and landing area under which adequate areas may have to be located to permit a safe landing in the event of an emergency.

Autotation: a power-off flight condition when the engine is not driving the main and tail rotor systems. The main rotor is driven only by the action of the relative wind providing a means to maneuver to a safe, low speed landing in an emergency. Autotation is a built-in safety factor, the equivalent of a power-off glide in an airplane.

Downwash: a variable volume of air moved downward by the rotating main rotor, resulting in a flow or airblast spilling outward as the air strikes the ground and is re-circulated by the main rotor.

Helicopter: a rotary-wing aircraft which depends principally for its support and motion in the air upon the lift generated by one or more power-driven rotors, rotating on substantially vertical axes. A helicopter is a V/STOL -- a vertical and/or short take-off and landing aircraft.

Heliport: an area, either at ground level or elevated on a structure, that is used for the landing and take-off of helicopters and includes some or all of the various facilities useful to helicopter operation such as helicopter parking, hangar, waiting room, fueling and maintenance equipment.

Helistop: a minimum facility heliport, either at ground level or elevated on a structure for the landing and take-off of helicopters but without such auxiliary facilities, as waiting room, hangar, parking, etc.

Off-Heliport-Landing Site: a take-off and landing area intended for temporary or occasional helicopter use but not formally designated as a heliport.

Peripheral Area: a safety zone that provides an obstruction-free area on all sides of the landing and take-off area.

An airplane lands and then stops -- a helicopter stops and then lands.
HELIPORT CHECK LIST

1. Recognize the need for a heliport or helistop.

2. Review governmental regulations -- city, county, state and federal -- regarding zoning, city planning, building codes, ordinances, etc. to assure proper compliance.

3. Select a suitable heliport site or sites.

4. Contact a local helicopter or helicopter manufacturer's representative to check the operational feasibility of the proposed site.

5. Submit the required prior notice of proposed heliport development to the Federal Aviation Administration (FAA) Airports District office.

6. Discuss with helicopter operators and FAA representatives the selection of air routes and operating procedures.

7. Consult qualified architect or engineer to ensure compliance with design, construction and technical requirements.

8. And if required, submit application on proposed helicopter operations and heliport location for license or approval together with request for local re-zoning if needed.

This is a suggested check list to follow in establishing a heliport or helistop. As situations vary in different parts of the country, all these suggested steps may not be necessary. For example, a ground level area on a parking lot or lawn or an open rooftop area may be available requiring none or a minimum construction. In many instances, the area need only be marked, fenced and a wind sock installed.

* * * * *

- 275 -
This is a typical off-shore oil rig heliport. There are more than 2,000 of these landing facilities in the Gulf of Mexico and more in other coastal areas. A Sikorsky Skycrane lowers a 52-ton engine assembly onto the drilling platform.

A Bell Twin-Two-Twelve -- a 15-place helicopter -- lands on the convenient City Hall rooftop heliport in downtown Los Angeles.
In Seattle, Washington, the downtown HELIPARKER Garage has its own control tower and windsock.
